DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Gaylord (US 6,956,600 B1).

Regarding claims 1-8, Gaylord discloses a method of realizing multi-picture (spatial multiplex video picture frame 100 is made up of individual picture frames 102 of individual people participating in a videoconference; Figure 1; col. 3, lines 60-67), comprising the following steps:

a Multipoint Control Unit (server 702) creating an indicator (indicators are included in a picture header in a slice format, including CPM block 212, PSBI indicator 214, GSBI indicator 308, ESBI indicator 232, etc.; col. 5, line 20 - col. 6, line 10; col. 7, lines 17-43) ;

each of the terminals (client terminals 704, 706, 708, 710) receiving said indicator (col. 7, lines 17-43);

when receiving the sub-bitstreams from the respective terminals, the Multipoint Control Unit combining the sub-bitstreams into a composite bitstream and sending the

composite bitstream to a display terminal (server 702 employs the processes of Figures 5 and 6 to combine all of the encoded picture frames into an encoded spatial multiplex video picture frame; col. 8, lines 52-61);

the display terminal receiving the composite bitstream (the spatial multiplex video picture frame is displayed on each display screen 714; col. 8, lines 55-61).
